★ Accelerate your video editing and ★ Customize the project timeline for video editing with it's advanced timeline features. User Reviews (0) Videoder is an intuitive video and audio downloader that can snag any clip from YouTube and other related platforms, provided you have the clip's URL. Easy to use Upon launching the app, a YouTube page with recommendations based on your IP will be available for inspection. This feed cannot be refreshed, but the number of results is limited to a dozen or more videos. What's nice about these videos is that you can access, view, and download them with the preferred quality. Moreover, if you are interested in only the audio sources, you can easily download them from the same list as the video options. URL-based download As the provided video feed doesn't have a search function, you have to go to YouTube, find the video you want to download, copy its URL and paste it the designated field within the app. Over 1000 supported sites If you take a look at what's under the URL field, you can notice the symbols of some of the most popular hosting and social media sites out there. Upon expanding that list, you'll find out that Videoder is able to snag videos from numerous websites. If you want to check them all out, click the View All + 1000 link and you'll get redirected to a page that lists all the supported sites. To sum it up Videoder is a powerful utility that, besides YouTube videos, can easily download content from almost any site you are aware of. Besides its functions, Videoder offers a very comprehensible interface that will cause no operational problems, regardless of the user's technical skills.
