Apr 18, 2016 I am a programmer. They will not accept my bootloader. I have tried to make a change that will allow it to boot a different image and they still won't accept it. It's either my install or the bootloader. The SPL is from 4.2.0 onwards and I have to go through a chainloader so it will boot an older 4.1.0. I am installing the new firmware from scratch. I have tried to push it but it still doesn't find the image. I want to revert back to the last version and make sure I have no issues. I have the steps down to a "T." Any and all help is greatly appreciated. WhatsUp Gold network monitoring software lets you monitor your entire networked infrastructure as well as applications, configurations and network traffic. Sep 5, 2018 WhatsUp Gold uses its Network Traffic Analysis module or what some people call Flow Monitor to monitor dark web traffic. It's using NetFlow data .
