Download and install English-Indonesian Dictionary For PC Windows 10/8/7 Free Offline.. The Indonesian-English dictionary and the English-Indonesian dictionary are very different .Q: How to solve a recurrence relation in a defined manner We have the following recurrence relation $\frac{f(n+1)}{n+1} = 2 \cdot \frac{f(n)}{n} - 1$ and we are asked to solve it in a way that satisfies the following conditions: $f(0)=1$ and $f(n+1) > f(n)$, $f(n) > 2^n$, and $f(n+1) \leq n$ then
$$\sum_{k=n}^m k = \frac{m(m+1)}{2} - \frac{n(n+1)}{2}$$
 This implies that $f(n+1) + n = \frac{(f(n)+n)(f(n)+n+1)}{2} - \frac{n(n+1)}{2}$ which may be rearranged as follows $f(n+1) = \frac{f(n)^2 + 2f(n)n + n^2 + n}{2}$
