It has a label and two buttons as a separate child elements. I want to disable the click and selection of this component. I mean, I don't want to have any selection or click on this component, but the user should be able to see the label. Do you have any suggestions for this scenario? A: You have to go through the entire tree of children and disable the selection in each child. See here for an example. This means each child has to implement the similar method: public class MyChildClass extends Component { @Override protected void onSelectionChanged(HasSelectionEvent event) { super.onSelectionChanged(event); //Disable selection } } Shri at the Premier of India on the occasion of Madan Mohan Malaviya Birth Centenary celebration Shri at the Premier of India on the occasion of Madan Mohan Malaviya Birth Centenary celebration Centenary of Birth of an Inspiration to Millions of Indian Dr. B.R.
