KEYMACRO is a program that aims to allow users to conveniently record and re-play keyboard shortcuts. Program options: Keymap is a resource that stores the keyboard shortcut for every menu item. You may create new resource, add existing shortcut, or delete them all. Keymap EXE file has two functions: it's a resource file that stores keyboard shortcuts for menu items, and a console window that allows you to insert these shortcuts into the command prompt at run time. Usage of keymap.exe: Open keymap.exe with Windows Explorer. In case the program is not in the default location, you can find the folder on the disk where the program is kept. Select the file that you want to use for recording the shortcut and click the button that will launch the application. Insert a new shortcut into the command line. In order to do so, double click on the text box and type the command that you wish to add to the command line. Add a new line by hitting the return key. Then, right click on the text box and select a keymap shortcut. You can also add a shortcut by typing the command into the text box. Add existing shortcut to the command line. To do so, select a file in the directory and click on the Edit menu option. Then, click on "Replace a shortcut or keymap entry". Finally, select a shortcut or a shortcut code and click the button. Delete a shortcut. You may delete a shortcut either by clicking on the shortcut that you want to remove or by using the "Delete shortcut" button. Select one of the shortcuts that are stored in the program. In order to do so, go to the menu and select "Select shortcut". You will get a list of the
