-:1 On October 24, 2013, Microsoft released the complete package at xpc
Products: Microsoft Flight Simulator X
2013 v1.0 Microsoft Flight Simulator X
2012 v1.0 Microsoft Flight Simulator X
2011 v1.0 And the new version of
Microsoft Flight Simulator X from this
November 2013. Aviation: Simulated
Commercial Aviation, Business, or
General Aviation Aircraft, including in-
cockpit aircraft instruments, systems,
and controls, and airspace features;
include aircraft models, scenery, and
airports; support for most types of

aircraft, including: Airplane models, including all types of passenger, commercial, and business aircraft; including 737, 757, MD-80, MD-90, T-Rex, Q400, Cessna 182, Citation X, Beechcraft 1900, Boeing 737, and Gulfstream IV. Scenery, including major airports, landing strips, runways, taxiways, and terrain. Traffic, including in-cockpit radar, weather radar, flight plan information, flight waypoints, traffic advisories, and traffic control towers. Support for the real-life control towers and air traffic control that

oversee air traffic at large airports, including: Emirates, Delta, KLM, Air France, Swissair, Qantas, Malaysian Airlines, US Airways, Aer Lingus, Skywest, and JetBlue. Additional features: Flight planning and navigation. Autopilot features. Weapons system selection and trigger support for weapons fire on simulated air to air and air to ground targets. Training and multiplayer modes. Support for basic and extended aircraft insurance. In-cockpit virtual controls and displays. Supports "Lear Jet" for

maintenance and repairs of simulated aircraft. Support for multiple real and simulated aircraft. In terms of aircraft that can be flown, Flight Simulator X allows you to fly any aircraft that Microsoft owns the rights to, even aircraft not included in the original flight simulator such as: De Havilland Canada DHC-6 Twin Otter Gulfstream I, II, III, IV and V Grumman Gulfstream II Grumman American AA-5 Pave Tiger Piper Archer Piper PA-32 Seminole, Champion, Supercub, Arrow, Paxton Tiger Cub, PA-31

Navajo and Thunderbird Piper PA-26
Comanche, Challenger, Warrior, and
Aztec North American PT-22 and T

3rd party tools and add-ons. Hi all, As some of you might know, the FTC is conducting an investigation into the practicability of IP "addresses" and may, in the end, adopt them as an effective way to provide the appropriate granularity of IP addresses for network management and charging purposes. A group within NANOG has been working on developing IP address usage rules and has received some support from the major network address registries. The rules that have been agreed upon are to be published in

a FAQ format. This week, the FTC published a notice about their investigation and invited interested parties to submit comments by July 26th. This means that the rules will be published sometime in August. As of now, the rules on IP addresses are: 1) No assignment of addresses from one address range to another. 2) Usage of private IP address ranges (10.0.0.0/8) within enterprises is allowed, provided they are being used exclusively for that purpose. 3) Usage of private IP address ranges (172.16.0.0/12) within

enterprises is allowed, provided they are being used exclusively for that purpose. 4) Usage of private IP address ranges (192.168.0.0/16) within enterprises is allowed, provided they are being used exclusively for that purpose. We would appreciate your comments, particularly if you are prepared to contribute to the FAQ document. If you are interested, please send us an e-mail and we will put you in touch with the right people. Thanks!

Richard B. Landstrom, MVP - Network Engineer
