So, if I want to make predictions, it must be there, ready to use, and this data can be used in the programs that I have developed. How to use Kaggle Notebook to make predictions? Try this: It is not possible to post this code in a public environment because it uses Python packages that are not available in other environments. Observations of the current stack: I have multiple Python files, where each one of them is related to one of my projects, for example (as an example): Tests/Base.py: with the following code: `from.Utills import unittest from.Test_class import Test_class as test_class class Test_class(unittest.TestCase): def test_str1(self): str_tmp = "my_test_str1" self.assertEqual(str(str_tmp), "my_test_str1") def test_str2(self): str_tmp = "my_test_str2" self.assertEqual(str(str_tmp), "my_test_str2") def test_str3(self): str_tmp = "my_test_str3" self.assertEqual(str(str_tmp), "my_test_str3") def test_str4(self): str_tmp = "my_test_str4" self.assertEqual(str(str_tmp), "my_test_str4") def test_str5(self): str_tmp = "my_test_str5" self.assertEqual(str(str_tmp), "my_test_str5")` Using PyCharm or Eclipse to run this code, I get the error message of "syntax error", pointing to the first line of code. Using Jupyter Notebook or Python shell, everything is ok. Any idea why? Thanks. A: The answer came from the support of Kaggle. Actually, there is a syntax error in the first line of code because it is expecting a newline character (

I posted this in the GB thread but didn't get a response. It doesn't look like OKC has many posters, but I hope those posting can respond. perfect secrecy for aq bit .If possible, I'd like to see him say it wasn't for sale, it's part of a "decent" gift and I wouldn't go for it if I knew what he wanted. It certainly wasn't for sale. I don't think there is anything that can be done with it, but if you can access it, I would appreciate any help. I really appreciate it. Please let me know if you can access it and I'll be glad to have it. fffad4f19a
