To understand how the DeepFreeze software works, let's begin with the main question, can a computer be "frozen" in the state . The DeepFreeze software from Faronics is a comprehensive system restore software that protects multiple hard drives and partitions, prevents configuration drifts and helps keep your system in perfect working order. Faronics A: I can't answer the security question, but I can answer your question directly. and then point me to the linux documentation that shows how to do this. It's not Linux. It's Unix. You can find documentation for the "freeze" command in /usr/share/doc/mount or /usr/share/doc/busybox. Those who fear their personal information could be at risk from terrorists are in for some relief. But this week's announcement by the Obama administration of measures to bolster national security in the wake of the Boston bombings doesn't give up on the government's idea of strong encryption: it does so, instead, by pointing to an earlier tech pioneer's approach to encryption. Edward Snowden was in Moscow on Thursday, providing testimony on the NSA's PRISM spying program. The whistleblower took the stage with Laura Poitras, a documentary filmmaker who has been working with Snowden and has just published a book about him. They gave a talk together. It included some information about Snowden's disclosures, which have put the government under pressure to disclose its surveillance activities and undermined its ability to keep secret its sources. Snowden has said that he's not willing to return to the United States because of what he fears he would face there. Snowden describes the public's reaction to the disclosures as "reverberation of concern that sets off an emotional response, anger, and concern that the community will be harmed." He notes that at first, the media covered the issue largely as a legal one, a concern for the rights of citizens and the government. But now, he says, "people are beginning to realize that this is a much bigger conversation." Snowden is critical of the coverage. "There's nothing positive about a story that starts out as 'Snowden wants more freedom.' People will understand this isn't about liberty." Snowden does not defend the NSA's spying, which, according to the Guardian, has "invoked the authority of presidents and judges" and "conducted most of its activities without the knowledge of either the US Congress or the administration."
