get new texture seamless? I used a texture atlas which I generated with libGDX in this project: After play it, I found the texture were not seamless and a window popped up while I was click to play. How to solve this? How can I make sure the texture is seamless in Unity? A: In Unity you can specify two things. First one is in the inspector, in the atlas tab. The resolution will automatically be calculated based on the size of the atlas. You can also specify the resolution directly through the inspector. Second thing you can specify is the preferred size of the texture. This value is used when the size of the atlas is a multiple of the texture size. The value will be used as the texture size. You can change the texture size in the inspector as well. of one of the *Scenedesmus* isolates, strain BCSCC14, was the most efficient one in clearing the water of arsenic over a wide range of concentrations.
