An easy-to-use interface to a wide variety of OpenSSL certificate operations such as generation, signing, creation of certificate requests, and creation of self-signed certificates. 177 Ga. App. 755

(1986) 341 S.E.2d 777

DEPARTMENT OF

TRANSPORTATION v. JONES et

al. 71725. Court of Appeals of

Georgia. Decided April 9, 1986.

John A. Howell, Jr., for appellant.

Bradford A. Johnson, for appellees.

BANKE, Presiding Judge. The

question presented is whether the

Department of Transportation was
required to provide public road maps

at the junction of two highways

under construction. On September

12, 1984, the automobile of the

appellee-plaintiff Jones was struck

from behind by a motor vehicle

being driven by the appellant-defendant Smalls. Smalls and his passenger were each killed as a result of the collision. Jones's theory of recovery against the State was based upon Smalls' alleged negligent failure to yield the right of way to him, and thus the State was held liable for the loss of his life under the doctrine of respondeat superior. The evidence showed that the two highways involved in the collision were under construction at the time of the collision, but that there were public road maps at the construction site containing the relevant highway

numbers. Jones contended that the failure to provide maps at the construction site was a proximate cause of his loss of life. The trial court submitted the case to the jury under these special circumstances, along with a charge that the State was not an insurer of the safety of persons injured within its right of way, and that it was not responsible for the acts or omissions of a driver of a vehicle driven off the highway. The jury returned a \$50,000 verdict for Jones, and the State appeals. Held: As a general rule, "one of the duties of a contractor building a

public highway is to provide public road maps for the guidance of those who travel upon the road." *Simmons v. State*, 126 Ga. App. 53, 54 (190 SE2d 909) (1972); see also OCGA § 32-6-46 (Code Ann. § 95A-1006). There is no corresponding duty upon the State as the owner of the land to provide such maps. Our cases have not specifically so held, but the reason for this is implicit in OCGA § 32-

OpenSSL is a free, open source

toolkit intended to provide SSL/TLS protocol capabilities to developers. It can be used in a variety of ways, from cryptographic protocols such as public key cryptography and digital signatures, to development tasks like key generation, encryption and decryption, protocols such as S/MIME and SSLv3/TLS/DTLS, and more.

LONDON (Reuters) - British lawmakers are considering starting a new indefinite hunger strike at a former jail in northern England to protest against its use as a deportation centre, the group behind

it said on Saturday. The Campaign Against Political Correctness (CAMP), which began its 24-hour hunger strike on Thursday evening, is protesting against a “draconian” Home Office policy on hunger strikes in prisons that allow prisoners only for “purely religious fasts”. The government says it carefully assesses all hunger strikes, and advocates only halting them in cases where lives are at risk. The group said it had been threatened with immediate relocation to a “separate facility” at HMP Nottingham. “CAMP members would commit to a period of

indefinite hunger strike, entering into a campaign of civil disobedience against the Home Office policy that allows only ‘purely religious fasts’,” said the group, in a statement on its website (www.camp-faa.org).

“CAMP invite other political prisoners to join the fast.” The Royal Air Force base used as an immigration removal centre in Great Barr has been temporarily closed, the government said. The government said the military-run site had operated in line with Home Office policy on hunger strikes and it would be conducting a review of the asylum

system. The Ministry of Defence added that a number of officers had been involved in handling asylum seekers at the base., the test results have become “immaterial and immaterial” because “[m]ore than three days have elapsed between the evidentiary hearing in the district court on [their] Motion to Suppress and the time of the trial.” We also observe, as did the district court, that continued use of Pepsi’s drug tests might cause the remaining tests to yield invalid results, thus indicating the need for continued testing.

eEasy Software is proud to announce the release of OpenSSLUI, the easiest SSL toolkit to use.

OpenSSLUI is a GUI for OpenSSL based on the Windows User

Interface toolkit. What is

OpenSSLUI? OpenSSLUI is an easy-to-use GUI for OpenSSL. It is a

simple tool that offers the most commonly used OpenSSL operations with a Windows GUI. eEasy

Software is proud to announce the release of OpenSSLUI, the easiest

SSL toolkit to use. OpenSSLUI is a

OpenSSLUI is a GUI for OpenSSL based on the Windows User Interface toolkit. OpenSSLUI - Import certificate and private key

The program comes with all features needed to get the job done, with the typical 3 tabs one first needs to go through so as to make the app start and run: *** Software Info *** The first tab contains information about the app and how it is maintained.

The second tab contains a list of all available operations and the third one contains more details about each operation. *** Keys *** The keys tab allows you to create a key pair, add an existing RSA, SHA512 password or import a certificate and the associated private key. RSA private keys can be generated in the Windows and Linux formats. RSA public keys can be generated in X509 and PEM format. Certificates can be generated in X509 or PKCS#12 formats. *** Install *** The Install tab installs OpenSSLUI.exe on the target

computer and imports the keys and certificates from the save file. ***

Start *** The start tab allows you to start OpenSSLUI with only the certificate file to use. OpenSSLUI was created for all OpenSSL enthusiasts, in particular for beginners. **OpenSSLUI Key Features**

- Create a self-signed certificate, import a certificate and private key from file, import a certificate from an existing file •
- Use OCSP to validate the certificates
- Sign file and import your certificate to a PKCS12 file format •
- More functions including RSA

private and public key generation
and support for PKCS#8 files •
Export keys in the PEM and
PKCS#8 formats • Export
certificates in the X509 and
PKCS#12 formats • Includes

Code Open Source Open Source Software Open Source Software, usually abbreviated to OSS or FOSS (Free and Open Source Software), is a category of software that has the following characteristics: Its source code is available to anyone, usually for free Anyone is able to modify the code and redistribute it to others Anyone is able to modify the code and submit their changes back to the project A project with these characteristics is also commonly referred to as Open Source, an Open Source project, or Open Source Software. Etymology The word open

source is a portmanteau of open peer review and source. Peer review is the concept of a community of people checking and approving published work, just as with all published scientific research. The source of an open source project is its source code, and open source is discussed from the perspective of free software in particular. History Open source was originally a commercial marketing term coined by Ari Luotonen, a former chairman of the Open Source Initiative. The term "open source" was adopted by several commercial companies as a

marketing term for their projects, with the intention of establishing a worldwide brand for software that was openly developed, freely distributed, and shared among its users. As the Open Source Initiative was preparing for the OSI's first conference in 1998, Luotonen put together a list of "open source" companies and projects. The idea of open source marketing was actively being considered in other companies with various business models, which led to the exclusion of one of the initiators from the definition.

Definition Open source software is

software whose license grants the recipient of that software the freedom to study, change, and distribute its source code. An important feature of open source software is that it is the product of the community it is based on, so the project is not controlled by an organization. In contrast to free software, open source is not necessarily licensed under the GNU General Public License (GPL), so an open source software application may be non-free. To be considered open source, a software application must be available to the community,

and have a license allowing for
modifications

System Requirements:

Comes with an internet connection and recommended hardware.

Minimum system requirements for StarCraft II: Wings of Liberty: CPU: Intel Core i3/i5/i7 - Intel's Xeon is not supported. Memory: 4 GB RAM Videocard: Intel HD Graphics 4000 or compatible AMD Radeon HD 5000 or higher. Wings of Liberty uses a unique version of the StarCraft II Battle.net client. It's not compatible with the StarCraft II client found on Battle.net, and you will need to download and install a

separate version of the client
