LISP was originally an optional add-on for the AutoCAD release from 1994 to 2000. A Visual LISP package was offered for both Mac and Windows platforms in version 2002. It was discontinued in version 2003 with the release of AutoCAD Architecture 2D, as there was less of a need for Visual LISP now that CAD functionality was included in the core product. Visual LISP was discontinued again in version 2005 when AutoCAD Architecture 2D was discontinued. AutoCAD Electrical was released for the Mac platform in 2009 and the Windows platform in 2010. In AutoCAD 2011, AutoCAD Architectural 2D was released and a new Design-Time Documentation Feature was added to AutoCAD, Autodesk, and other software on the Windows platform. In July, Democratic leaders in Congress postponed the "debate" on the issue of the Keystone XL pipeline because, in true demagogic fashion, they did not want to risk losing an election. But despite the best efforts of oil company lobbyists, whose sole concern is selling more crude, that decision is now moot, at least for a year. Today, President Obama has set a national moratorium on the construction of new oil pipelines and ordered an oil spill prevention and response plan. These moves represent a significant turning point in the green movement's quest to stop the growing extraction of coal and crude oil from American and Canadian land, a development that in turn will irreversibly accelerate the country's global warming. The looming halt to new oil pipelines is crucial to the climate agenda because these energy projects are the most viable source of Canadian tar sands crude. If Obama completes the moratorium and mandates a response plan, we should expect no new oil pipelines to be built, at least for the next year. The most sensible course of action would be for Obama to order the U.S. Department of the Interior to examine the environmental impacts of every pipeline proposal before issuing permits to build them. But that would take political courage, given the president's fear of being outflanked by the right. It is ironic that Obama waited until a year into his presidency to implement the moratorium. Although it is too early to celebrate, a modest victory has been achieved. It has taken more than 30 years of campaigning, legal action, fund-raising and demonstrations to finally bring the Keystone XL pipeline to the president's desk, where he holds all the cards. The facts are irrefutable: The pipeline will increase carbon dioxide emissions by 700,000 tons a year and produce up to three times as much pollution as conventional crude oil. Obama may have found a political way around the negative headlines he had to endure while deciding whether to approve the pipeline. He claims it would create jobs, but even
