WordPress is one of the most popular CMS platforms used by businesses of all sizes and for the most part, it doesn't come with much more than a basic template pack, a dash of plugins, and a single blog. Regardless of whether you're a business owner or a blogger, the latter, in particular, often struggle with the need to have more than one WordPress account. And this can become especially frustrating when you're signed in to the wrong account. So, if you're in this same situation, and you're looking for an easy way to manage multiple WordPress accounts, check out Zint. Zint is a free, open-source app that lets you easily switch between multiple WordPress accounts. It makes use of the KeePassXC password manager to store the credentials for your accounts, while it also generates a secure generated URL that you can use to switch between WordPress accounts. Aside from being a neat tool, the app is also meant to be secure, meaning that you

don't have to store your usernames and passwords anywhere. Besides the fact that it's free, Zint also boasts that you can switch accounts without logging in to WordPress, which is especially useful when you're working remotely and can't access your admin dashboard. Requirements The only required app that you need to have in order to use Zint is KeePassXC, which is available for Windows, Mac, and Linux. In addition, you also need to have Google Chrome or Chromium installed on your computer. How it works On its own, the app doesn't seem to have much in the way of its own, but it does give you the option to import your usernames and passwords

What's New In FireDM?

FireDM is an easy-to-use and powerful download manager application that comes with some handy features like resume function, download scheduling, file segmentation, intelligent file downloader, clipboard monitoring and monitoring history function.
