Description: iTunes is one of the most widely used multimedia platforms around, with almost 1 billion registered accounts. Not surprisingly then, the media application has seen a lot of utilities designed to somehow improve its users' overall experience while browsing, listening or buying music. Song Sergeant is just one such practical program that allows users to cleanse their iTunes multimedia library. Remove duplicate entries The application is designed to remove duplicate song files, as well as to repair inconsistent metadata entries within current songs. Broken entries or orphaned songs are also detected and one of the great features of the program is that all the results found are placed in separate tabs. This allows users to check each entry and decide on the actions to be taken. Scans are performed automatically upon launching the application; if, however, the tool fails to detect any issues, a quick remedy lies in making sure that iTunes is configured to share XML data with third party programs. Adjust analyses by refining scan parameters Depending on the issues found, users can take several actions, including deletion of the duplicates found, migration of orphaned songs to the iTunes library, as well as renaming inconsistent entries or removal of broken links. A great feature is the ability to fine-tune scans, as users can select which metadata or file attributes to be analyzed and compared. For example, one can compare entries via titles, artist names, file size or kind, as well as any number of mixes between these parameters; a 'duration' slider can also be employed to improve results based on the track length. An asset for iTunes users with large multimedia libraries To conclude, Song Sergeant is a practical tool for anyone who regularly uses iTunes to play or buy songs. The program allows its users to easily cleanse the playlists of duplicate, inconsistent or missing media files and the thoroughness of the scans can be adjusted to improve results and eliminate false positives. For the past week, my kitten has been scratching herself a lot. I see blood. My roommate says that it isn't too serious, so I would like to keep it as a pet, but I really think I should see a vet. A: It looks like your kitten is experiencing the "idiopathic, undifferentiated dermatitis" (which is the more common term for the condition). This is not necessarily a bad thing, but if it is more than mild, then it will need to be treated. You don't need to worry too much. If it doesn't improve within a few days, and if your vet doesn't have experience with this, then you need to contact your vet. This is a condition that is often resistant to treatment, and to your vet, so they will want to make sure it gets treated. A: It depends on what you see. It looks like you could call it a case of skin abrasions and or bites (or both, it's hard to tell), just like your roommate mentioned. This is often a result of a young cat's exploration, so if you think it's mild, no need to make a big deal out of it. It could be a bit more serious, but is not the end of the world. If you want to be more sure, you could take a photo and ask your vet if that's a typical outcome of being an explorer. If you see blood, it could be a very serious condition which is often more serious than this. If you don't know much about your cat, ask your vet. Cats are pretty tolerant of stuff like this and it's quite difficult to make them worse, but if you want to make sure your cat is ok, you should take it to your vet.
