

I just want to create a list with the tuples as the second element and also a string of the filename of the found file. As mentioned this list is split by CRACK. A: This should work In [4]: from regex import findall In [5]: l = [(‘foo’, ‘bar’), (‘baz’, ‘foo’), (‘bar’, ‘baz’), (‘foo’, ‘bar’)] In [6]: [findall(pat, l[0][1]) for pat in r‘CRACKs+S+s+Incl/s+(‘S+’ if pat Out[6]: [(‘foo’, ‘bar’), (‘baz’, ‘foo’), (‘bar’, ‘baz’), (‘foo’, ‘bar’)] or equivalently In [7]: [findall(pat, l[0][1]) for pat in r‘CRACKs+S+s+Incl/s+(‘S+’ if pat[0] == ‘CRACK’] Out[7]: [(‘foo’, ‘bar’), (‘baz’, ‘foo’), (‘bar’, ‘baz’), (‘foo’, ‘bar’)] Archives Press Release: “The Trump administration has signed a directive that will effectively ban all research on chimps, despite the fact that chimpanzees are the closest living relative of humans.” We’ve done a lot of research into finding chimps for our theme. We’ve worked with a bunch of people and communities to help fund research projects. We found two amazing chimp communities in the Republic of the Congo and the Democratic Republic of the Congo. And we found a beautiful community in Uganda. On our way to Uganda, we stopped in Tanzania. It’s an incredible area, and for one of the first times I’ve actually taken a picture of the roadside. There are all kinds of nice things to see, but one of the neatest things was a huge matatu (minibus) in the jungle. So, we got off the bus and walked a bit in the forest. I didn’t go into the matatu, but there were probably about 40 people inside of it. I figured I’d watch from a distance and see if I could get the picture. As I was walking through the forest I saw the back of the mat 54b84cb42d
