AutoCAD 2018 for Microsoft Windows is the first major release of AutoCAD since 2009, with major improvements including tools for Modeling, Graphics, Engineering, Utility, and Vector Graphics, all developed under a unified codebase. Features available in AutoCAD 2018 include: - Geometric Modeling - Simple & Advanced Guided Creation - Advanced Shape Editing - Direct Edit Drawing for Drafting - Power Stroke for Design & Fabrication - Image-Based Modeling - Additional Engineering Support - Improvements to Graphics - Improvements to Vector Graphics - New Standard Features for Printing - New & Improved User Interface - Additional Rendering & Display Tools - Added 3D Modeling Capability - Improvements to Power Stroke, Design & Fabrication - Includes CadSoft for Workgroup (formerly LT for Windows), CadSoft for Engineers & Architects, and AutoCAD LT for Students, Educators, and Students - all available today! AutoCAD 2018 is compatible with all major CAD platforms and 3D printers. For more information on AutoCAD, please visit [www.autodesk.com/cad](http://www.autodesk.com/cad). AutoCAD offers an interactive workspace to perform functions across the entire design process. You can start with a blank sheet or blank paper, or draw objects, edit those objects, and eventually add them to your drawing. You can create a 2D drawing using 2D paper or 3D modeling space, and then you can combine these 2D and 3D features in the same drawing. Within AutoCAD, objects consist of different types of objects such as lines, arcs, circles, rectangles, polygons, polylines, and text. You can resize, rotate, mirror, move, and delete the objects. You can also move, rotate, and resize parts of the object. Click to enlarge AutoCAD is fully integrated with other tools, and you can access them from the Insert menu and toolbar. You can select a component and use it in any drawing. You can draw, edit, view, sort, select, and align the objects. You can also use in-context commands, such as the Undo command. You can also draw or create multiple views of your drawing. You can create 3D solids, surfaces, and 3D geometry. Click to enlarge How

The German - who has not raced since mid-October - has been given the all-clear from the FIA and will race for Williams in Spain. It is thought Rosberg will test on Tuesday in Jerez, the first pre-season F1 test, and will be alongside test driver Pastor Maldonado in the afternoon, before heading to Barcelona on Wednesday to run the team's new challenger for the 2013 season. Rosberg is fully confident that his stamina problems have gone away after using a special diet and reduced training following his crash at the German Grand Prix. But he has been dogged by rumours he was suffering from long-standing weight issues. "I'm excited about the new season. I want to keep going," he told GPUupdate.com. "We haven't missed a minute and we've come a long way. "It's just a matter of feeling good, not looking too tired, not getting tired on the track. "My whole life I've had to do everything in a way that has suited me and not my body. "I feel more fit than I've been for a long time. "It's something we've put a lot of work into to get myself to this point. "We have had a lot of positive steps over the last six weeks and that shows a lot about our work."Accounting Course Your one stop accounting shop Accounting Courses in Pune Accounting Course The foundation of this course is the logical study of the basic accounts and classification of assets, Liabilities and Income.

Reasons for choosing new markup import and assist functionality: Show where you've marked up a drawing; Preview the changes you've made in your current design. Help with too many marks on a drawing. Document and enhance your marking knowledge. Help in applying new design standards. Manage your drawing better. Support to accept Markup Assistant and import into the drawing editor for all users. Markup Import: Support for .msbx file format (.msbx is the native AutoCAD \*.blend file format). Use this to import marks that were created with the Markup Assistant. Click on Insert > Markup > Markup Import. (Figure 1). Figure 1. Markup Import Select your mark To import, you need to have all attributes of the selected mark in the Import data window. Use the Checkbox next to "Import attributes" to make sure that all attributes are there in the Import data window. (Figure 2) Figure 2. Select mark to import Select the Import document Select the document in which you want to import the marks. Select the location of the document. Figure 3. Choose Document to import Select a format Choose a format in which you want to store the marks. By default, the mark is stored as an .msbx file. Choosing a format to store the mark makes it easier to handle the mark during design reviews and improves performance. Choose either "No format" or "Blend". (Figure 4) Figure 4. Select a format to store the mark Specify the existing position of the mark. Import marks made with the Markup Assistant. The marks will replace the existing mark. Click on the checkbox next to "Replace existing mark" to select existing marks that you want to replace. (Figure 5) Figure 5. Choose to replace existing mark Select an output folder Select the folder where you want to store the mark. If you don't specify an output folder, it's stored in the Inventor documents' "Marking" folder. (Figure 6) Figure 6. Choose output folder Figure 7. Mark stored in "Marking" folder. (Click
