The original was for a C++ project. As noted in the comments and original answer, that approach won't work for a Visual Studio C# project. Listed below are different options for creating a self-extracting archive from a Visual Studio C# project. They are named for their Visual Studio project template: C# Console Application -.csproj C# Web Application -.csproj C# Web Application -.csproj (scratch) C# Class Library -.csproj All of the options below were tested with Visual Studio 2015 and .NET 4.5.2, but the default Visual Studio 2017 templates should be similar and the approach should work similarly. Option 1: In the Solution Explorer window, right-click on the project and select "Create ZIP archive..." from the menu. This will create a .zip file with the same name as the project and put all files in the current directory into it. If you want, you can add files from the project folder. The project folder will become part of the .zip archive. Option 2: Use the "Compress Files into a Folder" option from the right-click menu of the project. This will create a .zip file with the same name as the project and create a subfolder with the same name as the project for all the files in the project. Option 3: Right-click the project, select "Compress Files into a Folder" from the menu
