Klez Removal Tool is a compact and portable piece of software that's capable of removing the W32.Klez.gen@mm and W32.ElKern.gen viruses from your computer in no time. It can be used by novices and experts alike. Since installation is not a requirement, you can simply drop the executable file anywhere on the hard drive and run it immediately, as long as you have administrative privileges. As an alternative, you can move Klez Removal Tool to a USB flash drive or similar storage unit, in order to run it effortlessly on any computer, without prior installs. The "what you see is what you get" principle clearly applies to the utility, since there are no options available, aside from the ones shown in the primary window, such as configuration settings.
