The Mixer series is a four channel mixer featuring stereo line inputs and outputs, one analog output, two midi-in/out jacks, three mono outputs and one individual loop position for each channel. Each channel provides independent gain, pan, level and sends output to the host audio engine. The analogue in/out provides two paths to external audio sources. Both input and output are independently routed to the host audio engine. The mixer has a pair of mono audio outputs, which are routed to the host stereo output. A built-in level control allows you to meter the input/output from each channel. The mixers are designed to give more flexibility to your VST mixer workflow. The channels can be configured and used independently, or all used together as a 4-bus. Due to the unique routing procedure of this mixer, it is possible to achieve up to 4 separate VST audio engines and still use all the channels. Each channel can be individually triggered to fade in or out, and the fade lengths can be configured individually. Additionally, all channels can be configured to gate or fade during external crossfades. The combination of a stereo pair of tracks and a 4-bus mixer allows for a very flexible workflow. The mixer is designed to be slim, compact and its layout is clear and simple. The 4-bus feature is not as intuitive as it might seem at first glance. We have prepared a short tutorial video of this mixer. Each channel has a dedicated level control that offers a good compromise between controlling the gain and the level of the track. The Mixer is produced in Czech Republic, from a high-quality, double-plastic chassis. Each unit comes with a sturdy cardboard box and a soft padded anti-slip bag. Installation

Instruction First confirm if your driver system includes 32Bit hosts. If not, it is recommended to install 32Bit host. Open the software menu and choose the "Install". Start the "Install" from the Mixer device folder. During the install process you will get a detailed installation process. That is all.
