The Description panel in EJS has the following functions: • The Description panel is used to create and edit multimedia content that perfectly describes the current simulation. • You can create a textual description of your simulation with multimedia content and images, or add a HTML description. • You can add images and links to the description (these images will be displayed only on desktop browsers). • You can add up to nine buttons (the last button will be displayed by default). • The main use of this panel is to describe the simulation model, which is done in the Model panel. • Using this panel, you can also add a hyperlink to another Java applet that loads an HTML page. • The Description panel allows you to create and edit HTML content for your simulation. • You can use this panel to describe the simulation model, which is created in the Model panel. • You can add images and links to the description (these images will be displayed only on desktop browsers). • The hyperlink can be created from the Description panel and the Model panel. • You can add up to nine buttons (the last button will be displayed by default). • The main use of this panel is to describe the simulation model, which is created in the Model panel. • Using this panel, you can also add a hyperlink to another Java applet that loads an HTML page. • The Description panel allows you to create and edit HTML content for your simulation. • You can use this panel to describe the simulation model, which is created in the Model panel. • You can add images and links to the description (these images will be displayed only on desktop browsers). • The hyperlink can be created from the Description panel and the Model panel. • You can add up to nine buttons (the last button will be displayed by default). • The main use of this panel is to describe the simulation model, which is created in the Model panel. • Using this panel, you can also add a hyperlink to another Java applet that loads an HTML page. • The Description panel allows you to create and edit multimedia content that perfectly describes the current simulation. • You can add images and links to the description (these images will be displayed only on desktop browsers). • You can add up to nine buttons (the last button will be displayed by default). • The main use of this panel is to describe the simulation model, which is created in the Model panel.

What's New in the Easy Java Simulations?

EJS (Easy Java Simulations) is a Java platform independent application for the development of simple simulations, prototyping and creating web-applications. With this utility, no programmer is needed to be proficient in both Java programming and graphics, since it helps the user design and write their models in a simple and intuitive way. With EJS you can create simulations that simulate real-life applications and predict their behavior when changing variables.
