Folder Unhider is a user-friendly software solution developed as a means of helping you retrieve hidden data on your virus-afflicted external drive. External drives are often the target of attacks, particularly because they tend to come in contact with a variety of machines, some of which are sometimes less protected against such threats. Your external drive can easily become exposed to such dangers. In turn, this can result in a number of problems for you, some of which can have very unpleasant consequences, such as the inability to access certain folders, as they are altogether invisible. This can prove quite irritating, especially if it contains files that are important to you or which you needed to work with. Folder Unhider is meant to address this specific problem and attempt to undo the malicious effects of malware on your external drive, enabling you to access the hidden folder once again by making it visible to you and your computer. The application is fairly simple to understand, all you need to do is select the drive that is giving you trouble and press on the 'Run' button. Folder Unhider will then process the contents of the device and try to unhide any directory you cannot see. Additionally, it features a progress bar that allows you to view the undergoing process and know whether it has accomplished its task successfully. To summarize, Folder Unhider is a useful and reliable utility designed to provide you with a simple method of un hiding directories from a previously infected external drive, requiring as little as one push of a button to do it.
