[MI5.com]Review of: Abong Mbata - "Sumaya" (2019) Compatibility Thoughts: Camera (Most of the time): Wimax 5.0, 5.5, 7.0, 7.5 and 7.0 X920 or 5.0/5.5/7.0/7.5 X1 (First gen from Asus) WiMax 720, 7.7 and 7.0 X750-H (First gen from Asus) WiMax 5.0, 5.5, 7.0, 7.5 and 7.0 X920 or 5.0/5.5/7.0/7.5 X1 (First gen from Asus) WiMax 720, 7.7 and 7.0 X750-H (First gen from Asus) Hardware: Most smart phones would work as well as pc's. The four usb ports on the pc do work on the phones but do have to be connected with a mini to micro adaptor first. Video Card: A small to mid-level vid card would work as well. Only tested with the X920 and had to remove the mini to micro adaptor after a few minutes. The 7.0 X750-H had problems playing.wmv files until I removed the mini to micro adaptor. Will test the 720 later with the adaptor installed and see if things improve. The 10.1in widescreen Asus X920 maxes out at 1024x768 which is still good. Software: Windows 7 - N partitioned with all the used software on the C partition, both partitions have a hidden NTFS drive (fixed drive size) Sumaya is a 100 MB file - it will work fine with 5GB of memory. It is a compressed file. Open the.zip file and extract it with WinRar. After installing the software, restart the laptop and enter the Sumaya setup menu. Read the manual and follow the steps to setup Sumaya. Listen for the beeps and sounds and listen to the pointer moving in the Sumaya software. I know this is not technically a review, but I had a few questions regarding Sumaya so I thought I would share.
