The latest version of Photoshop is being called Photoshop CS6 and will be a part of the Creative Suite as of October 30. When Photoshop CS6 is released, it will be Photoshop's fifteenth full release. During all those years, it's evolved and the current version has created a whole new generation of photographers. Here's a look at what new features are sure to become standard and what you'll have to live without if you're not upgrading. In this feature article, we'll be looking at the updates in Photoshop that could also be used for non-photoshop related work. 1. Unlearning everything you know One of the most important things that Photoshop does is not just change the way you see images but teaches you how to see them. If you're a beginner, you may have to start all over with the tools that you'll use on a daily basis. It's like learning a second language. For a long time, Photoshop was used to paint directly into an image. This meant that if you wanted to correct mistakes on an image, you'd have to go to the Painters or Healing Brush tool and start undoing. It's a tedious process and hard to get your head around. When Photoshop CS6 was released, the new Content Aware Fill tool changed that forever. Content Aware Fill is a kind of magic that effectively replaces the need for the Paint Bucket tool. It's a tool that lets you click on a spot on an image and fill in the area around it automatically. What's really neat is that the tool can automatically spot common elements in an image, like a sky, or a person's head or leg, and use them to fill in surrounding areas. If you're already a master of the Paint Bucket tool, you'll be able to use the new Content Aware Fill tool like it's a seamless replacement. Another great new feature is the Magic Wand tool. This tool can be used to roughly select a section of an image that you want to copy. Once you drag the Magic Wand tool over a certain area of an image, Photoshop copies that area over to another location, overwriting any layers below it. The new Magic Wand tool also lets you do a feathering effect and apply masks. It also has all the other tools from the regular Magic Wand tool, like auto paint, auto airbrush, and more. 2. Wider selection tools If you had any thoughts that Photoshop was going to become more and more difficult

Adobe Photoshop is the industry standard of image editing. Since it was originally released, Photoshop has evolved into a powerful photo-editing tool. It is an extremely

powerful graphics application that can edit many types of images and is used by photo studios and businesses to create artwork and product shots, and make other types of high-quality images. Photoshop also allows users to modify photographs, as well as to create new graphics. Photoshop has many tools that can be used to enhance an image. Understanding the Photoshop Editing Functions: Before you begin using Photoshop, it is important that you understand how the editing tools work. You should familiarize yourself with the different editing tools. While there are many advanced features in Photoshop, most of the functions can be found in the menus and shortcut keys. Most editing tools are found in the Layer section of the menu. The Shapes tool allows you to create, modify, and move type objects. The Elliptical Marquee tool allows you to select a shape and drag it around the image. This tool is good for removing part of an image or for filling the empty space within an image. Many shapes can be created with this tool. The Paths tool allows you to create an outline of an image using lines. The Line Tool allows you to create line objects. You can create free-form objects that can be filled with any color, line width, and color. The Pen Tool gives you the ability to create new line objects, and you can also draw a free-form shape or a curve. The Crop tool allows you to make adjustments to your image by selecting a portion of the image and removing unwanted parts. The Rectangle Tool allows you to draw rectangular selections in the image. The Custom Shape tool allows you to create custom shapes. This tool can be very helpful in creating circular shapes in images. The Eraser Tool allows you to remove undesired areas from your image. The Invert tool allows you to flip the colors of your image upside down. The Gaussian Blur tool lets you blur your image by applying a slight Gaussian blur. The Sharpen tool can be used to brighten or blur your image, depending on the settings. The Selection Brush tool allows you to paint on your image. The Color Picker tool allows you to choose a color from an image. The Filter effects allow you to apply different filters to your image. The Lasso tool allows you to select an area of the image and 388ed7b0c7

(See People v. McNeal (1993) 15 Cal.App.4th 786, 788-789, 19 Cal.Rptr.2d 473 [holding 45 days' custody period to be de minimus, a petitioner must allege some facts showing that confinement for more than six months would be an excessive term of imprisonment].) We reject defendant's attempt to rely on section 1170.126, subdivision (d)'s reference to a "term of three times the middle term." A term of three times the middle term does not refer to defendant's middle term of eight months. That subdivision authorizes the court to resentence an inmate who is "serving an indeterminate life sentence for a conviction of a felony or felonies that are not defined as serious and/or violent felonies by subdivision (c) of Section 667.5 or subdivision (c) of Section 1192.7." In addition, the Sixth Amendment does not require a term of more than five years under the reasoning of People v. Espinoza, supra, 3 Cal.4th 806, 12 Cal.Rptr.2d 682, 837 P.2d 1150, and the sentence defendant received exceeded five years. (People v. Hopkins (1986) 178 Cal.App.3d 308, 318-319, 223 Cal.Rptr. 706.) DISPOSITION The judgment (order granting probation) is affirmed. ARMSTRONG and KRIEGLER, JJ., concur. 1. Hypoxia and hypoxia-induced vascular endothelial growth factor expression through the hypoxia inducible factor-1alpha-dependent pathway in hepatocellular carcinoma. Our study demonstrates a significant upregulation of vascular endothelial growth factor (VEGF) expression in hepatocellular carcinomas (HCCs) compared with adjacent noncancerous tissues. In addition, hypoxia in HCCs was also detected by immunohistochemistry and related with levels of the hypoxia-inducible factor-1alpha (HIF-1alpha). We hypothesized that HIF-1alpha might be a regulator of VEGF gene expression in HCCs. The binding activity of HIF-1alpha was examined by electrophoretic mobility shift assay. The effect of HIF-1alpha on the transcriptional activity of the VEGF promoter was assessed by using the luciferase reporter gene assay. Hypoxia-induced VEGF expression was measured by reverse transcriptase-polymerase chain reaction and immunohistochemistry in HCC cell lines. A significant increase in the binding activity of HIF-1alpha to the VEGF promoter was observed in HCC cell lines under hypoxic conditions. Furthermore, normoxic HCC cells showed a pronounced increase in the VEGF expression after transfection of the HIF-1alpha expression vector compared with control cells. The hypoxia inducible expression of VEGF in HCCs might be partially explained by the function of HIF-1alpha.In an unannounced speech in San Diego, President Obama promised to prevent the elimination of millions of jobs, as Republicans threatened to force a government shutdown. "We will go through the pain of making hard decisions, but there will be no choice," he said. Mr. Obama called a 25 percent cut to spending over 10 years

"unacceptable," and said that he would not agree to that cut. His proposal would cut 5 percent from 2013 spending now, and the remaining 10 percent would come out of the $3.5 trillion deficit he would like to close by 2015. Earlier in the week, Mr. Obama won a promise from House Speaker John A. Boehner to hold votes on budget and tax legislation before the end of the year. But he said that those votes would be meaningless unless Republicans agree to further spending cuts. "We need to make sure that both sides know that neither the status quo, nor the
