You can use `freehand` to create web graphics, graphics for use on screens and monitors, logos, and more. It's included with all the Creative Suite programs (Photoshop CS, CS2, and CS3) and Elements version 9. Figure 11-7 shows `freehand` in action. FIGURE 11-7: Freehand is a canvas that enables you to draw graphics. You draw on a canvas or image with a pen or a tablet using tools similar to those of the drawing programs described earlier in this chapter. The Tools menu offers the most important tools. Depending on which tool you use, you can draw by using the mouse or pen, adjust the pen size, erase, and change the shape of your drawing. After you make a drawing in `freehand,` you can download it to your computer as a picture. If you've already created the drawing, you may choose Open, Save, or Export to open it. 1. Field of the Invention The invention relates to a hydraulic pump with an axial motor, more particularly to a hydraulic pump with an axial motor that is capable of minimizing oil leakage and improving efficiency while preventing the leakage of oil to the outside by decreasing the flow rate of oil flowing from an impeller chamber in the hydraulic pump to a fluid channel. 2. Description of the Related Art A hydraulic pump, a fluid flow device that pumps oil by rotating an impeller using a motor, plays an important role in an automatic transmission or a braking system of a vehicle. FIG. 1 is a perspective view of a conventional hydraulic pump with an axial motor. Referring to FIG. 1, the conventional hydraulic pump with the axial motor includes a first housing 12 and a second housing 24. The first housing 12 has a central hole 113, a first impeller chamber 151 defined in the central hole 113, and a first fluid channel 131 defined in the first housing 12. The first impeller chamber 151 has a central first impeller 22 facing the central hole 113. The central first impeller 22 is eccentrically disposed within the first housing 12. The first impeller chamber 151 has a diameter greater than the diameter of the central first impeller 22, so that the first impeller chamber 151 is positioned within the central hole 113 and a first axial motor 41 is disposed in the first fluid channel 131. The first impeller chamber 151 is formed with a first recessed wall 115. A first recessed groove 143 is defined in the first recessed wall 115 for containing a cushioning material 145. The second housing 24 is coupled to the first housing 12 with a first coupling 113. The second housing 24 has a second fluid channel 221 defined in the second housing 24, and a second impeller chamber 241 is defined in the second housing 24. The second fluid channel 221 is in fluid communication with the first fluid channel 131. The second impeller chamber 241 is formed with a second recessed wall 235, wherein a second recessed groove 243 is defined in the second recessed wall 235 and is in fluid communication with the second fluid channel 221. The second impeller chamber 241 has a diameter smaller than the diameter of the second impeller, so that the second impeller chamber 241 is partially positioned within the second fluid channel 221. A second axial motor 44 is disposed in the second fluid channel 221. In a typical operation of the hydraulic pump with the axial motor
