The opinions expressed by columnists are their own and do not necessarily represent the views of Townhall.com. The opponents of President Donald Trump seem to be more afraid of having a debate about the merits of the concept of national sovereignty than they are of a communist world government, which will be a far more important issue in a few years. To the extent this debate is going, it's largely about political correctness. It seems the Second Amendment is not OK to apply to this particular group, which might be the Second Amendment group. But, I just got back from a politically incorrect tour of Europe. It was a great trip. I'm willing to debate anyone over any issue on the planet, and it was gratifying to hear that I wasn't so much getting the "we know best" lectures about the way we handle guns, although I do get them from those who still think they know best. We also learned a lot about the end game of globalism, a problem that is more serious than the president's threat of tariffs. During this trip, I saw two examples where weapons were confiscated, and while it's sad, it actually makes it easy to say that we should apply the Second Amendment to state and local governments. The first was in Germany, where they confiscated military-style weapons and ammunition. These are the kind of guns that are just as likely to be used to kill a police officer in the line of duty as a burglar. While such weapons are often prohibited from military service, the German government made an exception. There have been no mass shootings in Germany in the last five years, nor have any mass killings, so I don't understand why the German government made this exception. To the extent that its leaders are worried about that happening, they can still follow the example of Australia, which has done away with military-style weapons and still has no mass shootings of the kind we see in the United States. The hypocrisy among the opponents of the Second Amendment is amazing. They argue we don't need weapons to protect ourselves from a few crazy people, but yet they are perfectly happy to tolerate government confiscation of these weapons. Second, I toured a gun museum in England. They had a machine gun, a sniper rifle, a couple of rocket launchers and an armored military vehicle. I wasn't told about how this was used against the Nazis, but it was impressive in its vintage. I'm not saying that's how you use one

Q: Building reference implementation from the source code of already constructed project I am writing a project that is based on architecture of an already constructed project. The interface of the projected is derived from the source code of the already constructed project. But the interface of the derived project is not developed from the source code of the project that is the base of the future developed project. So there is no option to access the interface of the current project. I need to develop some of the methods for the derived project, and will be using some of the classes of the current project. So my question is: How can I do this? Will I have to use MIDL compiler or any other way is there? A: Unfortunately, the best way to do this is to let the base code define the interface. This is what it was designed to do. You can have the interface portion of the base code be a fake interface, and the code in the derived class will use the real interface. Q: SWIFT SQLITE data base query not working I'm trying to create a data base with a sqlite3.swift library in my iOS app. My data base is empty on simulator when using the following code : let dbPath = NSBundle.mainBundle().pathForResource("myDB", ofType: "sqlite3")! let db = FMDatabase(path: dbPath!) db.open() At launch of the app, the message "database closed" appears, but when I close the app and relaunch it, the database opens. I can't understand why, if I added a line : db.close() Then the app doesn't open, which means the database is never open. Here's the whole code : import UIKit import SQLite3 class ViewController: UIViewController { override func viewDidLoad() { super.viewDidLoad() let dbPath = NSBundle.mainBundle().pathForResource("myDB", ofType: "sqlite3")! let db = FMDatabase(path: dbPath!) db.open() let resultSet = FMDat
